

Augusta Systems®

About

Augusta Systems, Inc. powers the intelligent convergence of devices, systems, and networks. Our award-winning EdgeFrontier® products provide configurable technology platforms for building and managing complex monitoring, control, and automation solutions, including applications for safety and security, energy and utility management, asset tracking, building management, and other business functions.

Products

EdgeFrontier products support integration and normalization of data, events, and control functions from diverse devices, systems, and networks, regardless of manufacturer or communications protocol, including sensors, wireless sensor networks, RFID systems, video devices and systems, access control systems, metering and measurement devices, actuators, databases and file repositories, and other devices and systems. In addition, the products provide structures for event processing and configuration of event or policy-based actions through a policy engine.

Leveraging these capabilities, EdgeFrontier products enable rapid creation of open, interoperable solutions featuring distributed processing, control, and automation throughout the network infrastructure. With the power of EdgeFrontier products, enterprises can unlock new features, decrease solution development costs, improve operational efficiencies, and increase the return on investment for new and legacy devices, systems, and networks.

Each product can be used independently from, or in conjunction with, other Augusta Systems products, depending upon client requirements. The products include EdgeFrontier, EdgeFrontier Appliance, and EdgeFrontier Developer Edition.

EdgeFrontier is remotely configurable middleware that resides on routers, servers, and other computing systems, providing a complete middleware platform for intelligent convergence solutions.

EdgeFrontier Appliance is a network appliance pre-installed with EdgeFrontier, providing a complete software and hardware platform for intelligent convergence solutions requiring remote network access and distributed processing capabilities.

EdgeFrontier Developer Edition delivers EdgeFrontier capabilities within a suite of components for the Microsoft Visual Studio integrated development environment, enabling engineers and developers with advanced requirements to create intelligent convergence solutions.

Augusta Systems also offers integrated products featuring EdgeFrontier. These include ThreatViewer® and GridMonitor™.

ThreatViewer features EdgeFrontier products and Augusta Systems integration services for customized safety and security solutions.

GridMonitor features EdgeFrontier Appliance embedded with OSIsoft software for easy integration of data into the OSIsoft PI System for energy and utility applications.
